Quickstart

Copy page

Get up and running with the Groq API in a few minutes, with the steps below.

For additional support, catch our onboarding video.

Create an API Key

Please visit here to create an API Key.

Set up your API Key (recommended)

Configure your API key as an environment variable. This approach streamlines your API usage by eliminating the need to include your API key in each request. Moreover, it enhances security by minimizing the risk of inadvertently including your API key in your codebase.

In your terminal of choice:

shell

```shell
export GROQ_API_KEY=<your-api-key-here>
```

Requesting your first chat completion

curl JavaScript Python JSON
