Digital Asset Standard (DAS)

Solana Fungible Token API: Complete Token Data Access

Copy page

The most versatile API for working with all Solana tokens. SPL tokens, Token22 extensions, price data, and comprehensive token information access.

Background

Initially, the DAS API only supported ownership queries against Metaplex NFTs and cNFTs. Helius has extended the DAS API to support **all tokens**, including plain SPL tokens (without metadata) and Token22 (plus their extensions).

Users can query for the token balances of **any** account, across **all** tokens (SPL, Token22, NFTs, compressed NFTs). We've also included token prices in USD.

A Solana token is defined by its mint account. For example, the mint account for USDC is **EPjFWdd5AufqSSqeM2qN1xzybapC8G4wEGGkZwyTDt1v**. When you buy $40 of USDC, a token account is created that holds 40 USDC tokens. This can extend to hundreds (and even more) of token accounts for different tokens.

How does it work?

New: Try Gatekeeper (Beta) for significantly lower latency. Learn More

The following queries provide a unified view of an account's assets. **GetAsset**, **GetAssetsByOwner**, and **SearchAssets** support fungible tokens.

This extension adds an extra field called `tokenType`. This field allows you to query against all assets the account owns, including fungible and Token22 tokens.

The options for `tokenType` include:

- `fungible` : Returns all fungible tokens.
- `nonFungible` : Returns all NFTs (compressed and regular NFTs).
- `regularNft` : Returns only the regular NFTs.
- `compressedNft` : Returns only the compressed NFTs.
- `all` : Returns all the tokens.

Example:

```
{
    "jsonrpc": "2.0",
    "id": "helius-test",
    "method": "searchAssets",
    "params": {
        "ownerAddress": "5aZZ4duJUKiMsJN9vRsoAn4SDX7agvKu7Q3QdFWRfV
        "tokenType": "all"
    }
}
```

You'll now see fungible tokens like JitoSOL in the response (trimmed for brevity). It will include the total account balance, the token's program address, the associated token address, the total supply in circulation, and the price information.

        "price_info": {
            "price_per_token": 56.47943,
            "total_price": 2015.6838854339217,
            "currency": "USDC"
        }
    },
[...]
```

Token22 Support

We support Token22 tokens and parse their extensions. The response will include the `mint_extensions` field if it is a Token22 program. Here is an example for BERN:

New: Try Gatekeeper (Beta) for significantly lower latency. Learn More

```
        "transfer_fee_config": {
            "withheld_amount": 0,
            "newer_transfer_fee": {
                "epoch": 457,
                "maximum_fee": 3906250000000000000,
                "transfer_fee_basis_points": 690
            },
            "older_transfer_fee": {
                "epoch": 455,
                "maximum_fee": 3906250000000000000,
                "transfer_fee_basis_points": 0
            },
            "withdraw_withheld_authority": "7MyTjmRygJoCuDBUtAuSugiYZFU
            "transfer_fee_config_authority": "7MyTjmRygJoCuDBUtAuSugiYZ
        }
    }
```

Backwards Compatibility

For backwards compatibility, the behaviour is identical to the original DAS, meaning only NFTs and compressed NFTs are returned.

```
{
    "jsonrpc": "2.0",
    "id": "helius-test",
    "method": "searchAssets",
    "params": {
        "ownerAddress": "5aZZ4duJUKiMsJN9vRsoAn4SDX7agvKu7Q3QdFWRfW
    }
}
```
